His leadership at SRR CET has left a lasting impact on the institution and the broader academic community.

ABOUT THE CONFERENCE:

The International Conference on Recent Trends in Science and Space Technology (RTISST' 2026) is a premier event bringing together researchers, industry leaders, academicians, and technology experts to explore the latest advancements, challenges, and future directions in Space and Science.

RTISST' 2026 aims to provide a wide knowledge about: Engineers in space technology - responsible for designing spacecraft, propulsion systems, robotics, and life-support technologies. Their scope spans from launch vehicle development to satellite operations, planetary exploration, and future human settlements on the Moon and Mars.

Satellite servicing technology is revolutionizing space operations by enabling refueling, repairing, and even assembling spacecraft in orbit-extending mission lifespans and reducing costs.

WHY THIS CONFERENCE:

The demand for engineers in space science is expected to grow rapidly due to increased government investment, the expansion of commercial space companies, and international collaborations. In India, the opening of the space sector to private companies has created new opportunities beyond traditional roles at ISRO, particularly in satellite development, launch services, Earth observation, and space-based applications. Knowledge sharing about space technology is the key importance of this conference.
